

**Snowmass Tribute 6Peruvian Monarch:**

Private Snowmass owned Stud

Born: 6-3-99 - Deceased 8-18-2011

The most astounding thing about 6Peruvian Monarch was his heritability of CONSISTENCY in fineness.

Please be sure to see his histogram and pay close attention to his Coefficient of Variance in Fiber Diameter (CV).

In most alpacas you see a slightly higher CV than the MFD (Mean Fiber diameter).

MONARCH was an exquisite exception to the rule!

He was a very well balanced strong framed stud male with what an IDEAL head. Strong square muzzle, heavy wool cap, dark almond eyes perfect bite and sharp speared alpaca type ears.

His son Snowmass Sub-Zero is an exact replica of him and as both have shown that all these very important elements Monarch possesses are highly heritable.

He was an essential genetic key to overall improvement in ALPACA FIBER.

Merino crimp with curvature in 40's and distinctly organized stapling. Extreme brightness and exceptional consistency of fineness.

Julie Skinner - Snowmass Alpacas
